

AWS SERVER

1. For creating the instances for we want to select launch instance

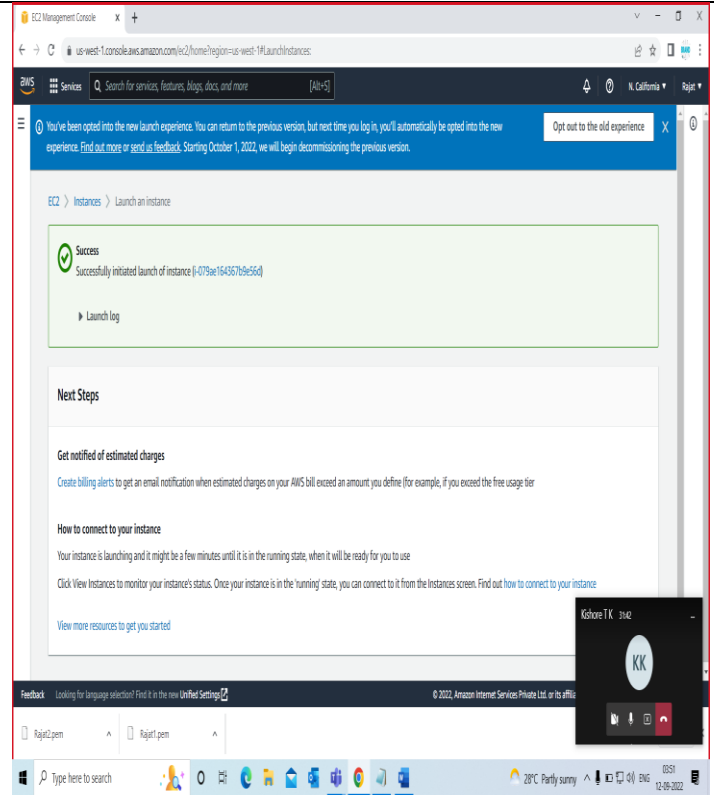

AWS SERVER

2. for security purpose we are creating key pair file.

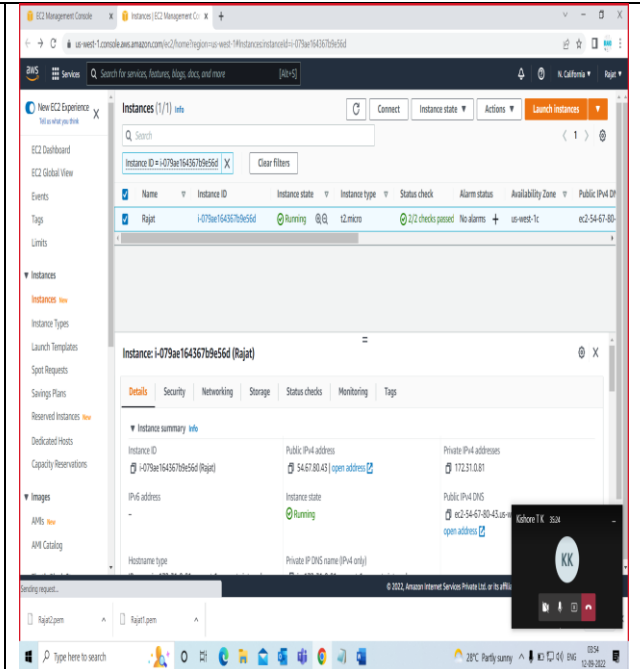

3. instance ID is created

AWS SERVER

4. the public IP address is created that is 54.67.80.43 and we will get a password and we have to brows the file which was created then we will get a password to proceed to the next step.

AWS SERVER

5. The window server is created
